# Weekly Project Progress Report

**Team No:** 11 Date: 24/08/2026

**Team Members:** Dhanush Thiyaree [715523243009],
Naveen E [715523243030],
Saravanamani S M [715523243047],
Vishnu Prakash S [715523243059]

**Name of the guide:** Ms. G. Suganya

**Project Title:** *A Multi-Agent Reinforcement Learning Architecture with Independent Sentiment-Anomaly Veto for Pump-and-Dump-Resistant Trading*

## Work Completed During the Week

- Finalized the problem statement: existing MARL trading frameworks model only price-action signals in their agent-voting loop and have no mechanism to quantify or react to manipulated/emotionally distorted market sentiment (e.g., pump-and-dump schemes, coordinated hype, panic cascades).
- Assigned tentative role ownership across the team: Analysis Agent, Risk Agent, Sentiment/Deflator Agent, and correction-loop/backtesting evaluation.

## Work assigned for next week

- Draft the end-to-end system workflow covering the Analysis Agent, Risk Agent, Sentiment/Deflator Agent, the correction/override loop, and the evaluation pipeline.
- Shortlist base papers with direct architectural relevance and map each to the specific module it supports.
